

# Airway Management simulation

Johannes Huitink, Dick van Groeningen, Nicholas Chrimes, Mikael Rewes

# Simulation: one word...

# Role of simulation for airway management training

- **Knowledge based learning**
  - Preprocedure assessment, anatomic knowledge, safety and limitations of airway devices
- **Task analysis**
  - Procedure can be split into different steps
- **Training in a laboratory environment**
  - Improved psychomotor skills
- **Transfer of (non technical) skills to the real environment**

Team work and decision making

# Different learning goals, different simulation methods

# Learning goals

- Task training
- Drills
- Difficult airway algorithm
- CRM
- Teamtraining
- Teach the teacher

- Is it important for learning to simulate the clinical scenario as realistic as possible?

# Technology-Enhanced Simulation for Health Professions Education

## A Systematic Review and Meta-analysis

David A. Cook, MD, MHPE

Rose Hatala, MD, MSc

Ryan Brydges, PhD

Benjamin Zendejas, MD, MSc

Jason H. Szostek, MD

Amy T. Wang, MD

Patricia J. Erwin, MLS

Stanley J. Hamstra, PhD

**Context** Although technology-enhanced simulation has widespread appeal, its effectiveness remains uncertain. A comprehensive synthesis of evidence may inform the use of simulation in health professions education.

**Objective** To summarize the outcomes of technology-enhanced simulation training for health professions learners in comparison with no intervention.

**Data Source** Systematic search of MEDLINE, EMBASE, CINAHL, ERIC, PsychINFO, Scopus, key journals, and previous review bibliographies through May 2011.

**Study Selection** Original research in any language evaluating simulation compared with no intervention for training practicing and student physicians, nurses, den-

tional design features or study quality.

**Conclusion** In comparison with no intervention, technology-enhanced simulation training in health professions education is consistently associated with large effects for outcomes of knowledge, skills, and behaviors and moderate effects for patient-related outcomes.

JAMA. 2011;306(9):978-988

www.jama.com

ts, and human cadavers.

Although technology-enhanced simulation has widespread appeal and many assert its educational utility,<sup>1</sup> such beliefs presently lack empirical support. Despite the large volume of research on simulation, its effectiveness remains uncertain in part because of the difficulty in inter-

CI, 0.34-0.66) for direct effects on patients (n=32). Subgroup analyses revealed no consistent statistically significant interactions between simulation training and instructional design features or study quality.

**Conclusion** In comparison with no intervention, technology-enhanced simulation training in health professions education is consistently associated with large effects for outcomes of knowledge, skills, and behaviors and moderate effects for patient-related outcomes.

JAMA. 2011;306(9):978-988

# Examples airway simulation

## Task training

- Surgical airway
- Videolaryngoscopy
- Bag mask ventilation

# Examples

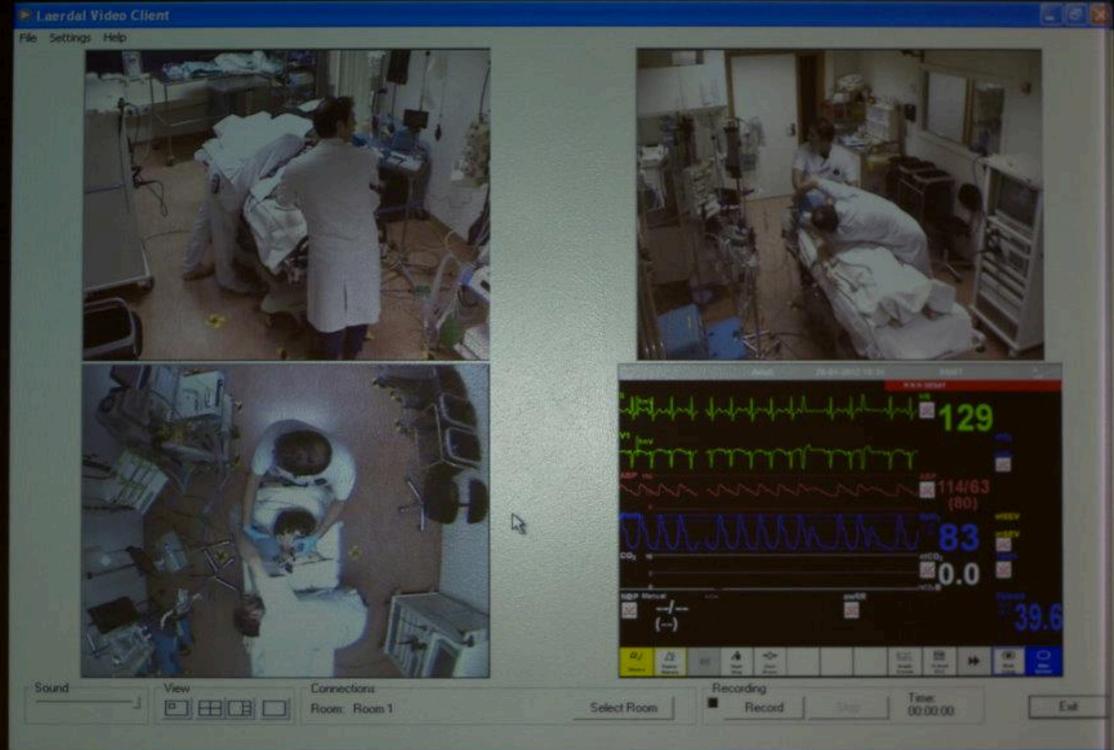

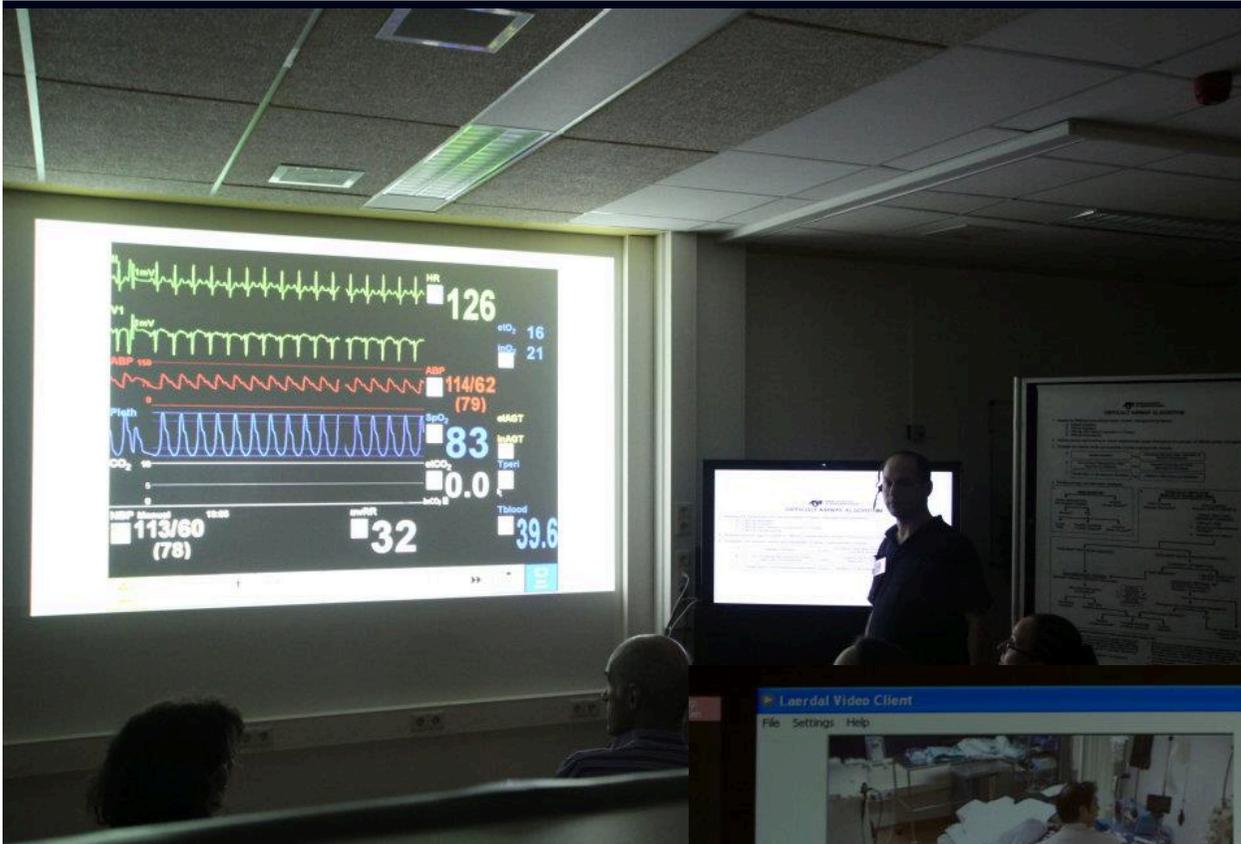

Learning with “stop and go” simulation  
decision making, team work, algorithms

# Stop and go

- Stopping during scenario, discuss and decide, then continue, debrief

# Examples...

- Learning as a team with scenario-based simulation

briefing

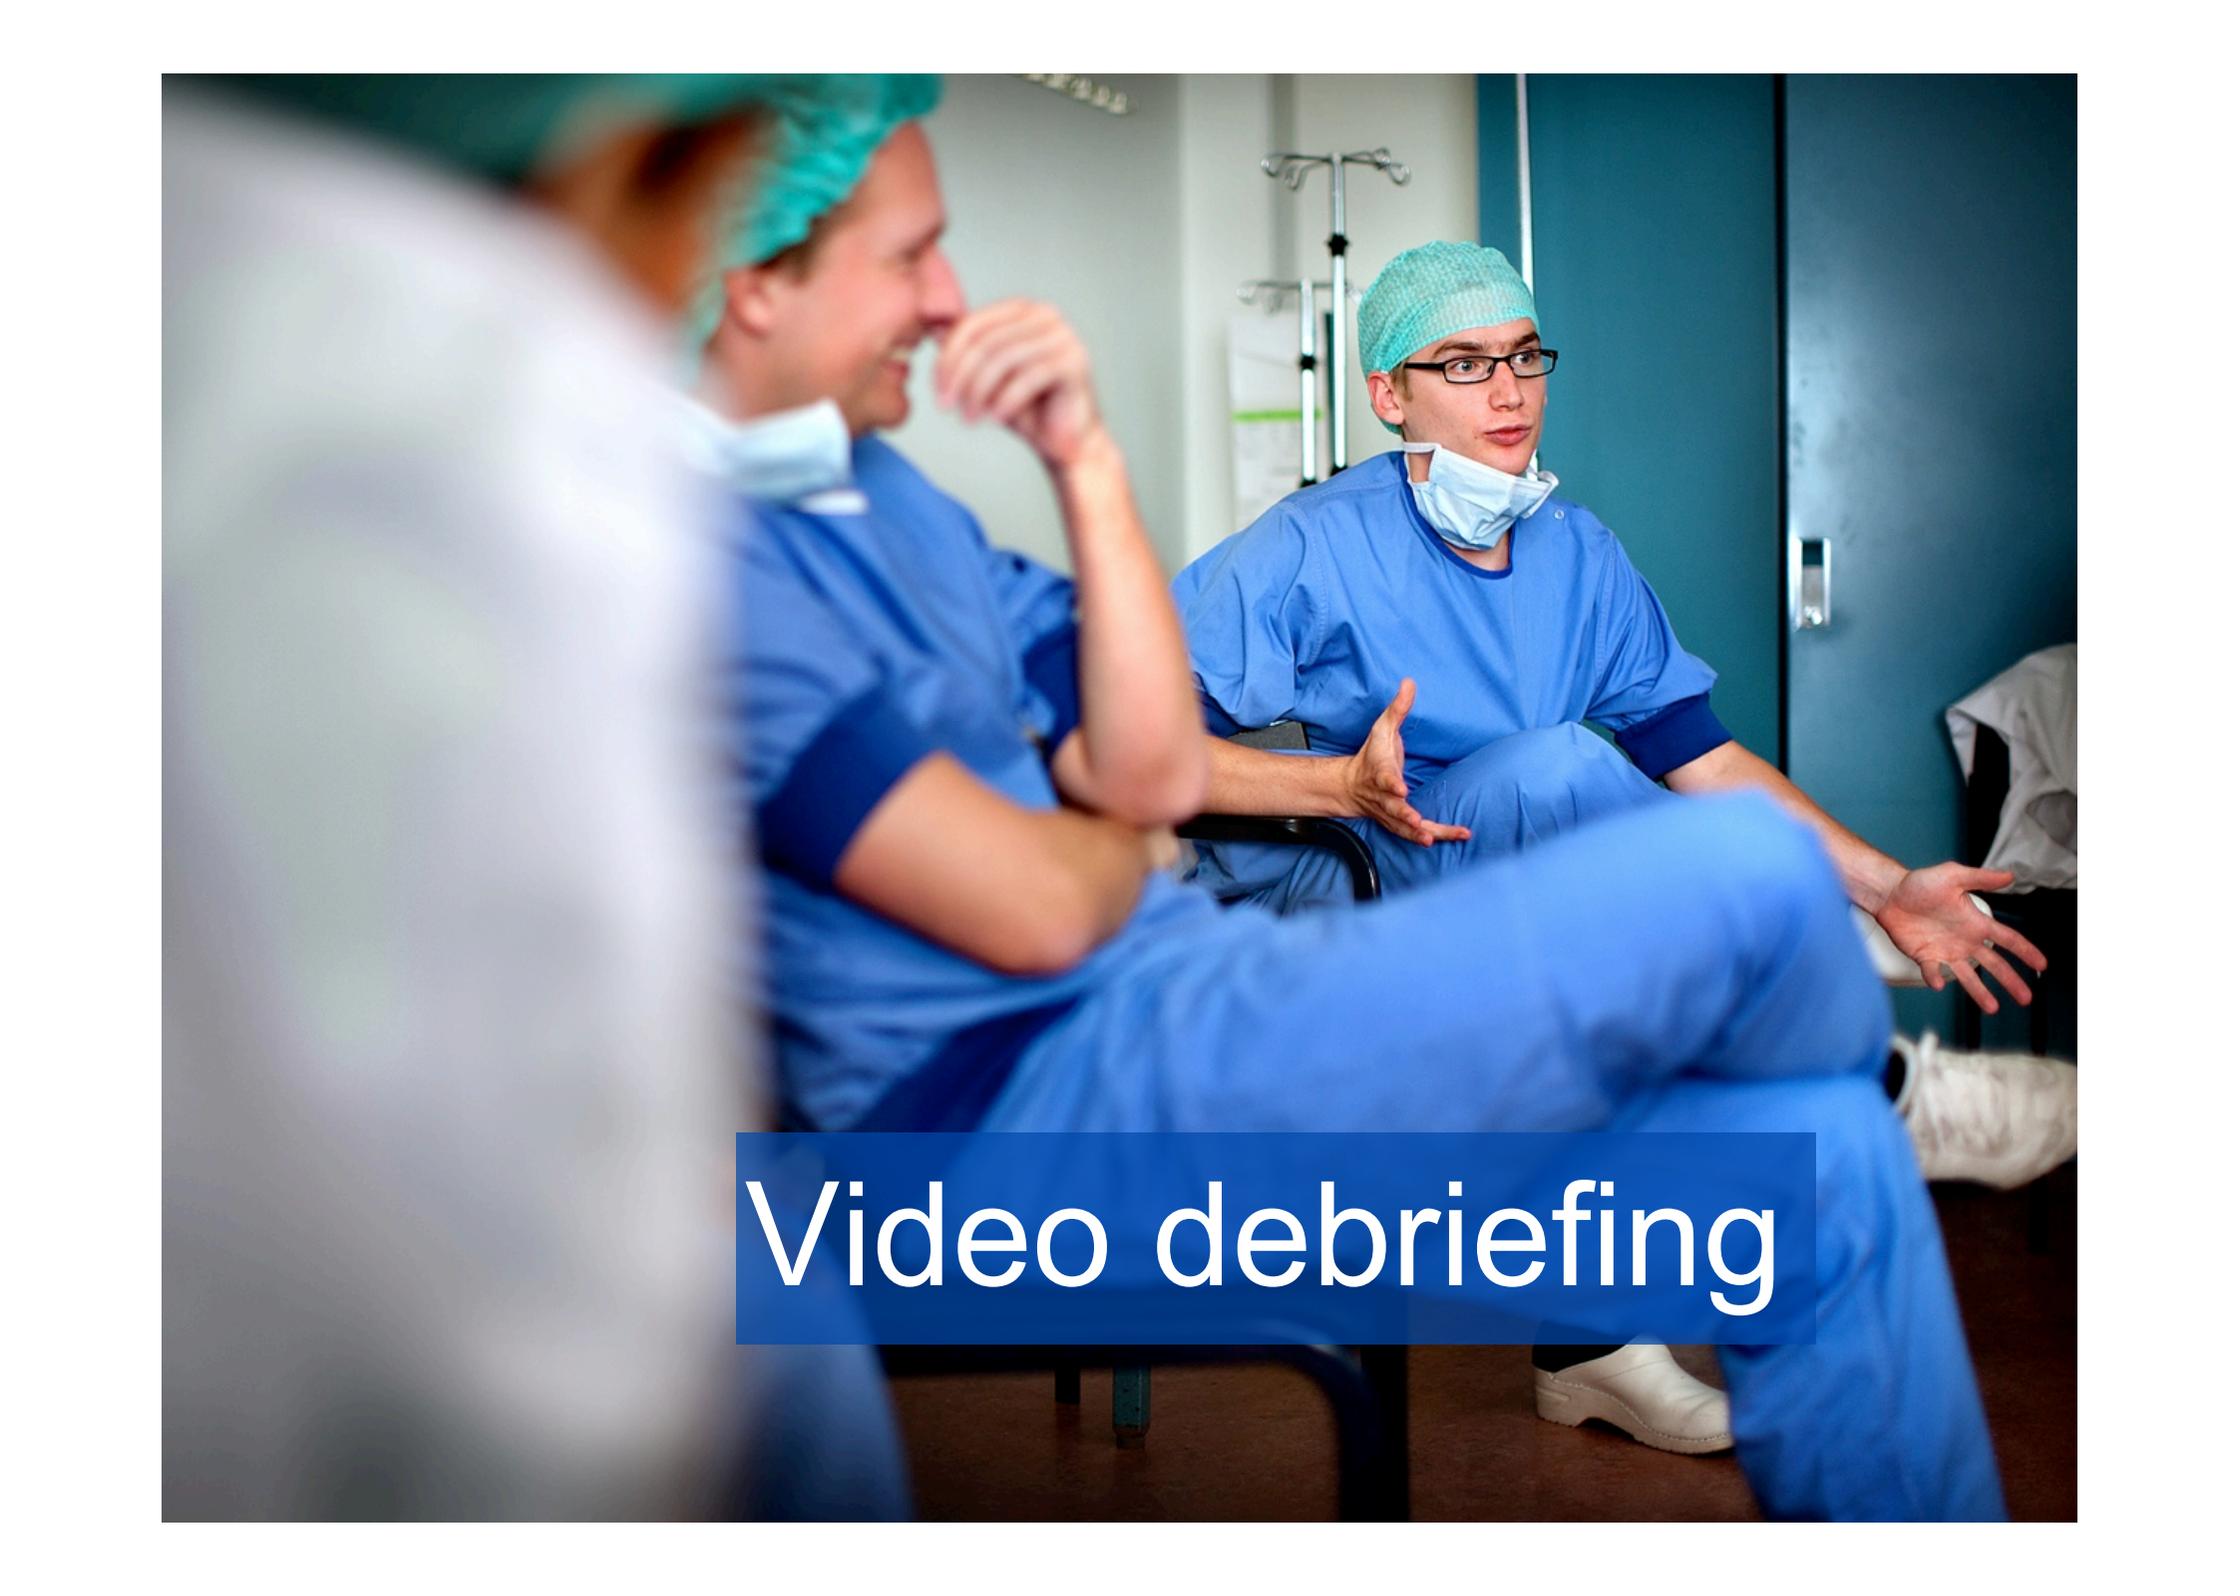

scenario

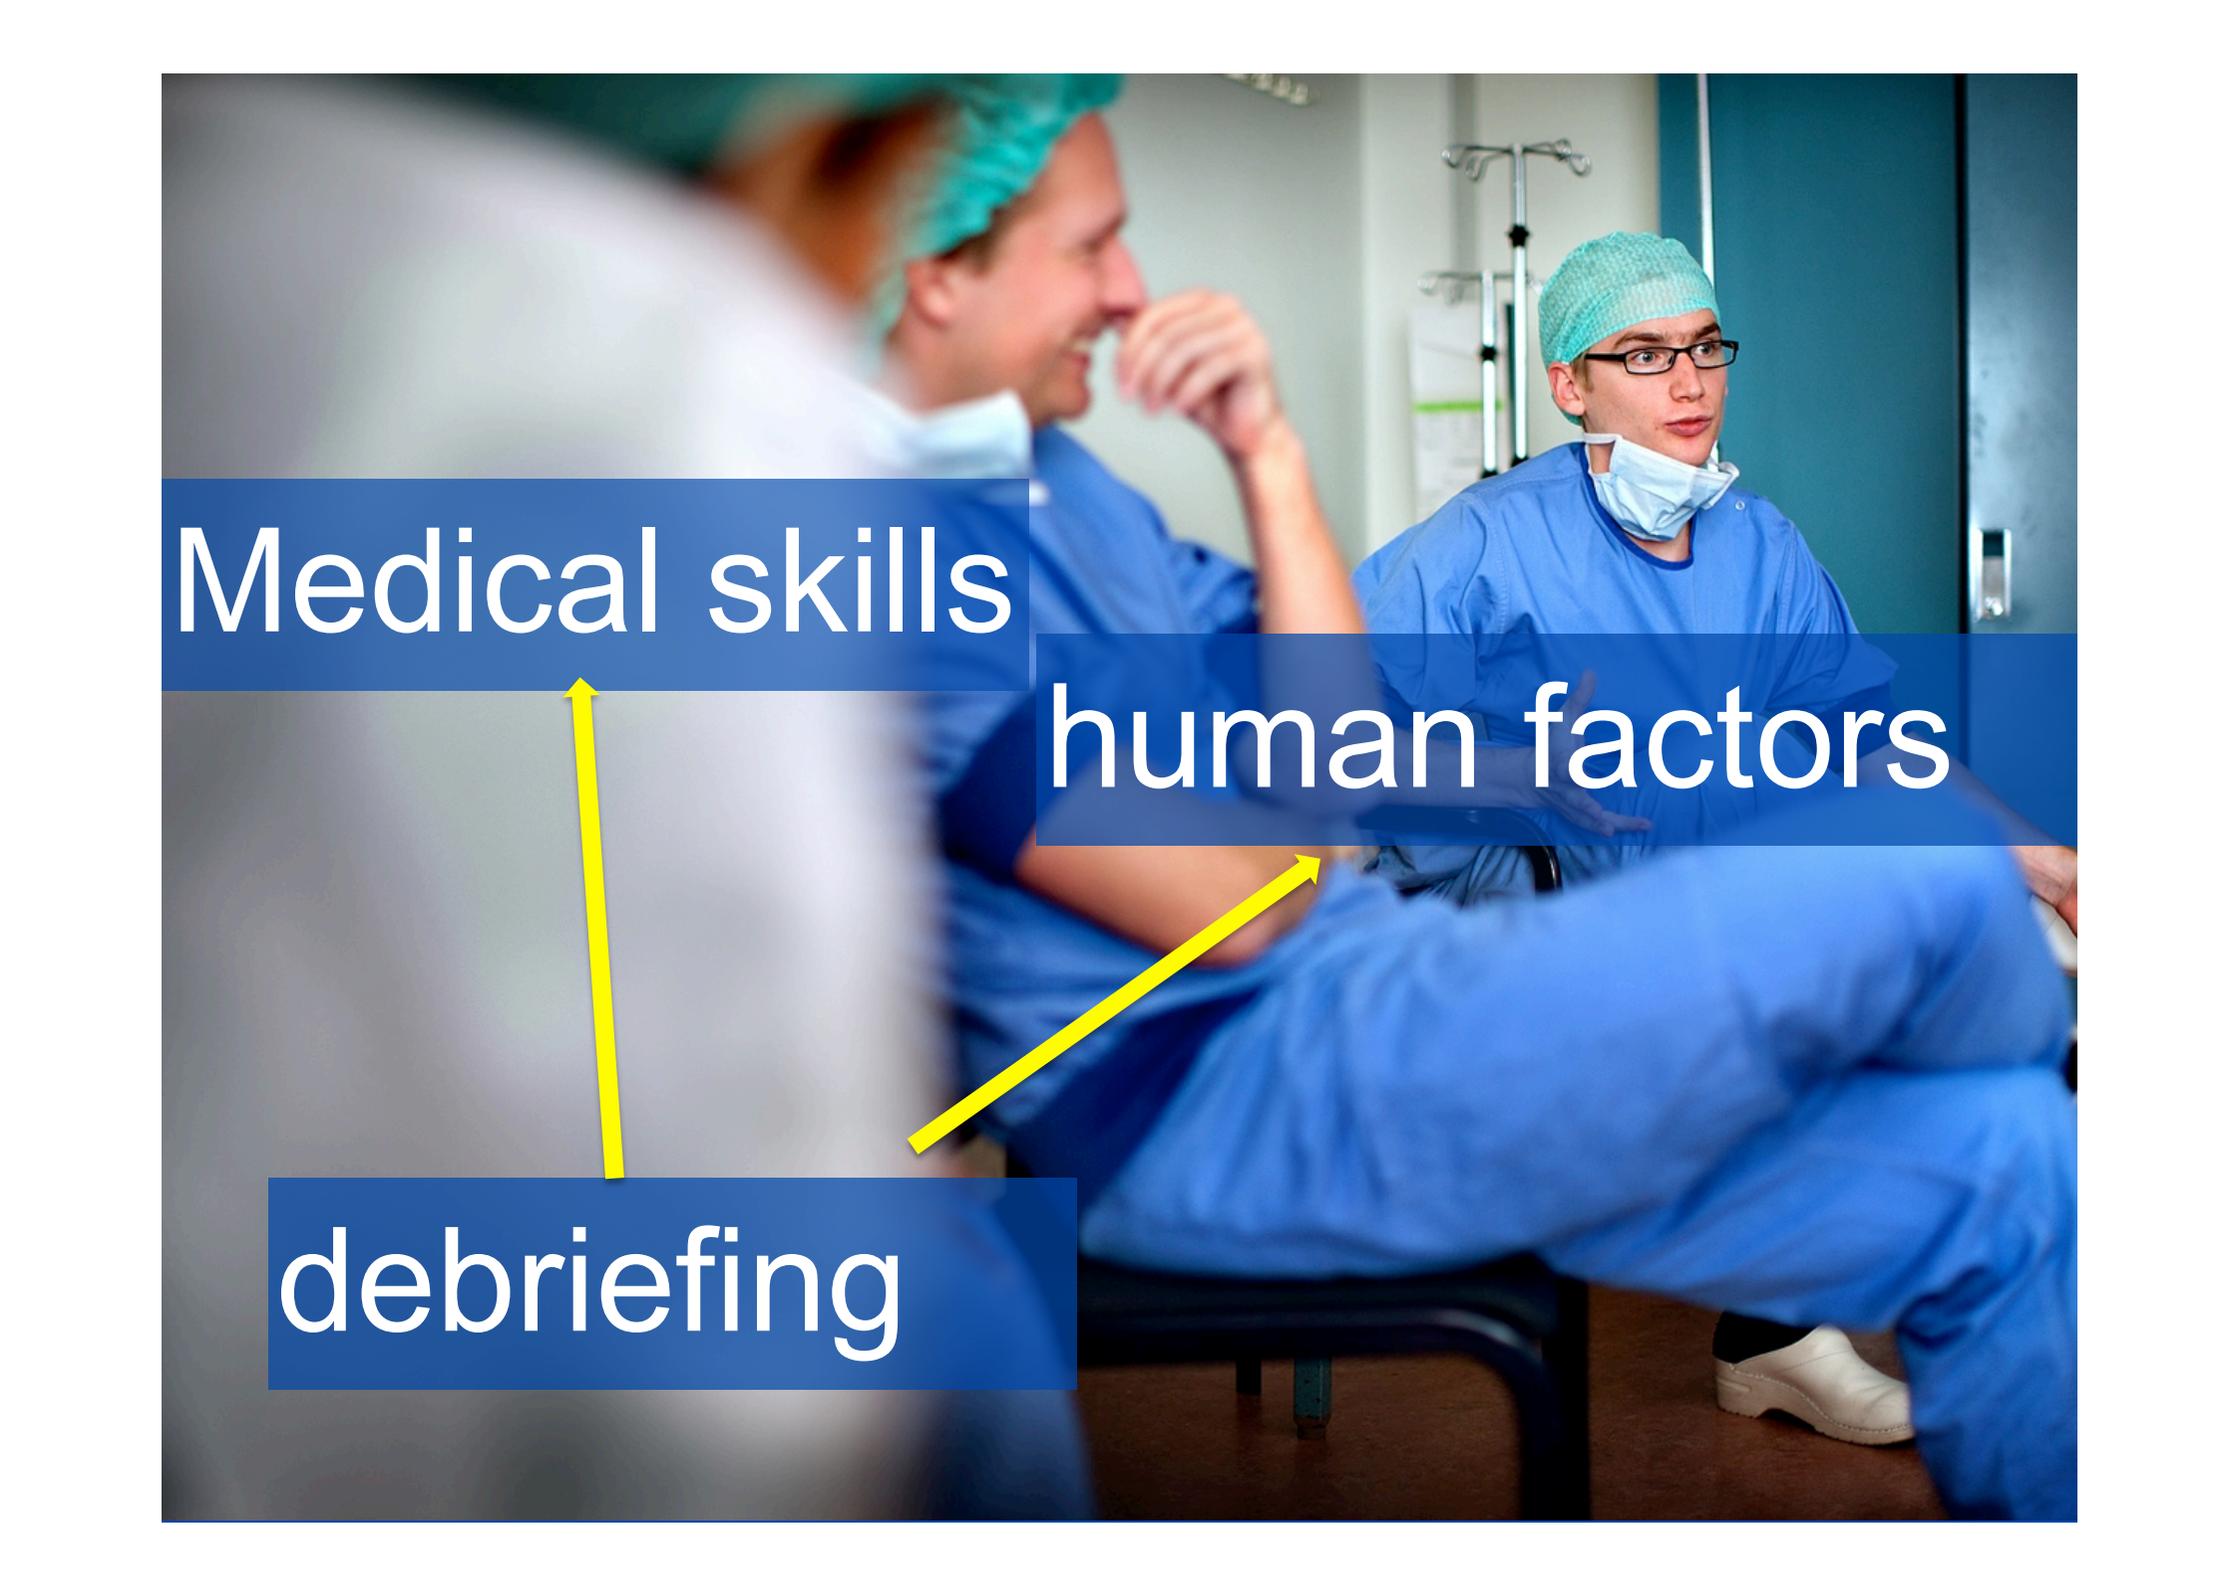

scenario

# Observation

Video debriefing

Medical skills

human factors

debriefing

## Other examples

- Difficult airway mannikins
- Simulate difficult intubation: case description around airway head
- Use Isim with sounds
- ORSIM virtual navigation

It's all about the learning  
goal and learning should be safe!

# And it should be fun

# Advanced Airway Management in Amsterdam...

**SAMT**

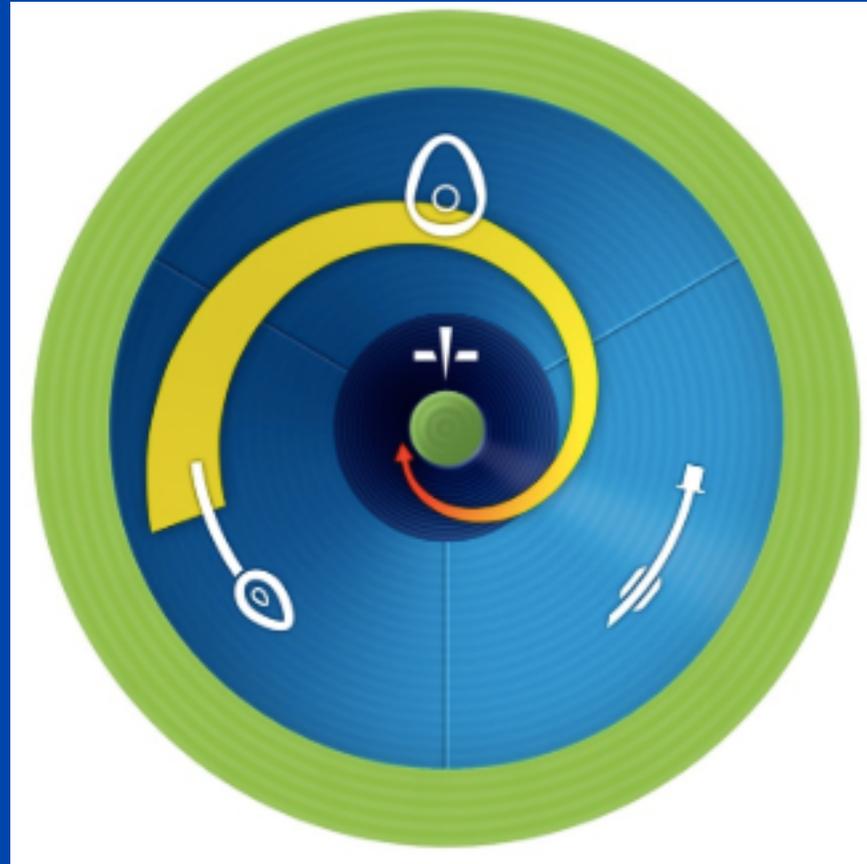

Simulation based Airway Management Training in Anesthesiology and Intensive Care

VU university medical center

# Virtual stop and go simulation

# Cognitive aids and non technical skills

# Conclusion

- There is a method of simulation for every goal
- Combining different methods can increase learning experience
- CU AT STATION 9A and B
